Product Description:	
<p><i>The lamp for standing upright, laying on the floor or for hanging on walls – has a gloriously organic form. The two hemispheres – made of high-quality robust polycarbonate – are brought together to create a timeless, compact form with the colour combinations blue/white, pink/white, yellow/white or white. The lamp can be used to highlight objects or to create a cosy atmosphere for togetherness at home, in a restaurant or a bar. This unusual lamp has been specially developed for use with low-energy light bulbs. The built-in electronic ballast guarantees a minimum electricity consumption and an uniform, flicker-free operation. The frugal 18-Watt ight bulb consumes less electricity than a normal light bulb.</i></p>
